Areas of Expertise

Reverse Logistics

From storage, documentation, logistics, dismantling, data destruction, separation to 100% pollutant removed homogenisation of recyclables, we offer our customers safe and cost efficient reverse logistics.

Data Destruction

Various secure methods for 100% guaranteed destruction of confidential media. Our service includes software-based methods (data wiping), and also the physical destruction by shredding for all kind of digital media types, such as hard drives, CDs/DVDs, USB memory sticks or even SIM cards according to standard DIN 66399.

Sustainability

Our people, our customers' best interests and environment conscious behaviour are always at the core of our strategic decisions. This underscores Supportive Recycling's commitment to sustainable development and corporate social responsibility along the entire business process chain.

Monitoring

Throughout the entire recycling process we monitor and record all relevant process steps according to our know-how and high quality standards. Supportive Recycling can provide its customers with required mass flow verification reports and waste disposal certificates. At request we provide our customers individual and continuously sorting result reports for their recyclable materials.
